PAST, PRESENT, AND FUTURE OF ABC IN PUERTO RICO

PRESENTED BY:
CHRISTIAN BERRIOS SOTO
MIGDALIA CARRIÓN ALERS
PUERTO RICO HIGHWAY & TRANSPORTATION AUTHORITY
SHRP2 INNOVATIVE BRIDGE DESIGNS FOR RAPID RENEWAL PEER WORKSHOP – ATLANTA
NOVEMBER 17-18, 2015
OVERVIEW

• ABC IMPLEMENTATION

• CURRENT AND FUTURE OF ABC IN PUERTO RICO
PR infrastructure characteristics:

- Most of the low-volume local roads do not have alternate routes.
- High-volume roads cannot be closed for an extended period of time.
- Some construction materials are not readily available and need to be shipped from abroad.

ABC techniques address most of the challenging issues in PR that typically drive project cost and time.
ABC innovations used in PR:

- Pre-fabricated Bridge Elements and Systems (PBES)
  - Total Bridge Reinforced Concrete
  - Fiber Reinforced Polymer (FRP) Deck Superstructure
ABC innovations used in PR:

- Geosynthetic Reinforced Soil Integrated Bridge System (GRS/IBS)
- Other applications:
  - Carbon Fiber Reinforced Polymer (CFRP)
  - Thin Overlay with Broadcast Aggregates (TOWBA)
Year: 1990 (Pioneered the use of ABC-PBES)

• AADT: 100,000

• 4 overpass bridges erected to replace signalized intersections

• 2-213m long (7 spans) and 2-274m long (9 spans)

• 72-hour limit of closure time for each bridge construction

• $100,000 penalty per day of additional closure time

• First bridge completed in 36 hrs, the following in as few as 21 hrs
ABC IMPLEMENTATION: PBES

- Precast Composite Parapet
- Wearing Course
- 100 ft. Long Precast Box Beams, 42 Inches Deep
- Precast Pier Cap
- Threaded Post-Tensioning Bars
- Precast Box Pier
- Cast-In-Place Footing
BRIDGE 281, PR-139, PONCE

- Year: 2008
- Original Structure: Two-cell culvert
- AADT: 5,300
- Replaced by FRP Deck Superstructure and Pre-cast Substructure
- Proposed Structure: 20m long (2 spans)
- Cost: $2.2M
- Duration: 1-year construction
- 2009 Outstanding Project of the Year Award (CIAPR South Chapter)

(AFTER)
BRIDGES 1121/1122, PR-2, YAUCO

- Year: 2013
- Original Structure: Three-span concrete slab bridge
- AADT: 40,000
- Replaced by GRS/IBS Substructure and voided slabs Superstructure
- Proposed Structure: 11.40m long (1 span)
- Cost: $2.3M
- Duration: 11-month construction
BRIDGES 1121/1122, PR-2
YAUCO
BRIDGES 2028/2029, PR-52, CAYEY

- Year: 2004
- Structure: 51m long (2 spans) constructed in 1973
- AADT: 67,000
- Rehabilitation consisted of “hunge” beam reinforcement using CFRP
- Cost: $500,000
- Load Test was performed before and after to validate results
- Results showed that Load Rating Factors increased from 0.44 to 1.02 for shear and from 1.03 to 1.88 for positive moment.
- The project’s success turned the use of CFRP into an institutionalized technique.
BRIDGES 2028/2029, PR-52, CAYEY
BRIDGES 2028/2029, PR-52, CAYEY
BRIDGE 238, PR-111, LARES
(BEFORE & AFTER)

Project Data:
• Cost: $224,000
• Duration: 2-month construction
BRIDGE 1277, PR-7787
OVER PR-52, CAYEY

(BEFORE & AFTER)

Project Data:
• Cost: $433,000
• Duration: 9-month construction
BRIDGE 281, PR-139, PONCE PROJECT

- Year: 2008
- Original Structure: Two-cell culvert
- AADT: 5,300
- Proposed Structure: 20m long (2 spans)
- The installation of TOWBA was used to improve skid resistance and protect the FRP Deck Superstructure.
- Nowadays, this technique is widely used for preservation/rehabilitation in existing bridges and to improve deck durability in new bridges.
SITE CONSIDERATION AND DESIGN

BRIDGE 281, PR-139, PONCE
ABC techniques currently undergoing:

• Pre-fabricated Bridge Elements and Systems (PBES)

• Geosynthetic Reinforced Soil Integrated Bridge System (GRS/IBS)

• Other applications:
  - Carbon Fiber Reinforced Polymer (CFRP)
  - Thin Overlay with Broadcast Aggregates (TOWBA)
Future of ABC in Puerto Rico:

• Design-Build
• Construction Manager General Contractor (CMGC)
• Lateral Bridge Slide
• Pre-fabricated Pier Cofferdams
THANKS!
